

## A 200Mbps fiber optic router is required

### Overview

The good news: Fiber-optic internet does not require a special router in most cases. The key is making sure your router can actually handle fiber's performance. This guide clarifies the requirements for optimal performance, explaining what your existing router can handle and when an upgrade is essential for unlocking the full potential of your blazing-fast fiber connection. Get ready to understand your network's needs. Frontier internet is provided using fiber-optic cables that transmit data as light pulses which allows for super fast internet service. A standard cable or DSL modem's job is to convert electrical signals into digital data that your devices can understand. It's typically a small box installed on an exterior wall or in a utility closet. TP-Link Archer A7: This router offers dual-band Wi-Fi speeds of up to 1750 Mbps, making it suitable for 200 Mbps connections.

## A 200Mbps fiber optic router is required
