

A router can be placed inside the fiber optic box

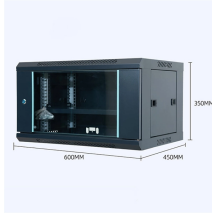

Overview

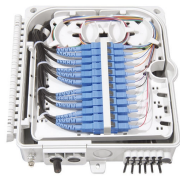

The good news is that once you're set up with an ONT, you're good to go for the future—you can simply plug any wireless router you like into its Ethernet port to set up a wireless fiber home network. In contrast to the modem situation, any router can work with a fiber . However, setting up a fiber optic connection to your router can seem daunting if you're unfamiliar with the process. Why Use Fiber Optic Internet?

Before diving into the setup, let's quickly. A fiber cable (drop) is run from a nearby terminal that could be either a pole or an underground box) to your home. The fiber line terminates at the Optical Network Terminal (ONT), which is typically supplied and installed by the internet service provider. Your router must have a Gigabit Ethernet WAN port to connect to the ONT.
