

## All lights on the relay protection device are red

### Overview

A: The red LED means the relay coil is energized—it's an indicator that the control signal has activated the relay. Unlike other red indicators, the LED on a RIB® relay is a status light, not a warning. Need help?

Quickly and easily find the right products and accessories for your applications. This has been possible before using the same PC Use the online E-Series protective relays troubleshooting guide to diagnosis and correct issues with Eaton's motor relay, generator relay, distributor relay, transmission. The protection device supervises its normal operation by executing various self-supervision checks during runtime of the device. Please check the. Helpful?

Objective: Relay devices will have three LED lights enabled at all times to indicate current connectivity status Environment: Relay Devices All Relay Service Plans Overview: Here is a reference to the LED lights you can see from Relay devices White. Protection relays are programmable devices, and their settings must be carefully configured to match the characteristics of the

power system they are protecting. Incorrect settings can lead to inadequate fault.

## All lights on the relay protection device are red
