

Atmospheric Optical Communication Module

Overview

We have studied optical and electronic signal processing methods to overcome atmospheric turbulence, in links employing either coherent detection or direct detection. NASA is upgrading optical communications for faster data transfer with lower mass and power, meeting the high-capacity needs of future space missions. Mike Marsden, Jennifer Downey, and Brian Vyhnalek in front of the Real Time Optical Receiver Project's high photon efficiency transmitter and. The University of Western Australia (UWA) has developed an active stabilization system that can perform coherent free-space optical transmission through the turbulent atmosphere at stabilities better than the World's best optical atomic clocks. In February 2020, Australian researchers led by Dr.

Atmospheric Optical Communication Module

The block diagram of an FSO communication link clearly outlines how light-based wireless communication operates — from laser modulation to optical detection. Every component, ...

Due to its absorption properties in atmosphere, the mid-infrared (mid-IR) region has gained interest for its potential to provide high data capacity in free-space optical (FSO) ...

AOA Xinetics has developed compact atmospheric compensation systems for horizontal path laser communications, including both ground based and airborne implementations.

Abstract: Atmospheric turbulence can generate scintillation or beam wandering phenomena that impairs free space optical (FSO) communication. In this paper, we propose and demonstrate a proof-of ...

NASA is developing quantum technologies for light-based communication and remote sensing, focusing on free-space transmission through space or Earth's atmosphere.

In this paper, to achieve higher robustness against atmospheric turbulence for high-capacity free-space optical (FSO) communications, an adaptive multi-modal FS

We have studied optical and electronic signal processing methods to overcome atmospheric turbulence, in links employing either coherent detection or direct detection.

The high-quality optical reference of the BASIK X15 OEM module was vital for achieving ultra-stable coherent free-space transmission. Its rugged and compact design allowed the researchers to build a ...

To overcome these limitations, this study proposes a novel hybrid FSO framework combining resilient structured light beams (Bessel, Airy, and orbital angular momentum (OAM) ...

A bidirectional laser communications modem, which will travel on the Artemis II mission with the first astronauts to visit lunar orbit in 50 years, developed with the Optical to Orion (O2O) program
