

Busbar leading out from the top of the distribution cabinet

Overview

This guide explains the advantages, selection criteria, and applications of DMC insulators for busbar fixing in low-voltage distribution cabinets. What Are DMC and SM Insulators?

DMC (Dough Molding Compound) insulators are high-performance electrical insulators used for low-voltage. Inside every professionally built distribution cabinet, the neatly aligned **busbars**—copper bars, conductor bars, or power distribution bars—**form the structural backbone of electrical energy transmission**. These busbar conductors carry large currents and serve as critical links between transformers, switching devices, and downstream loads. For electrical. Busbar systems are becoming the predominant solution for manufacturers across nearly all global industries as a safer, more effective, and more efficient method of powering control cabinets.
