

Carrier-grade router operating system

Overview

It's an open-source, production-ready operating system designed for service providers, OEMs, and operators building carrier-grade CPE (Customer Premises Equipment). Let's break down how prpIOS works, its architecture, and how it's different from projects like OpenWrt. What Is prpIOS?

As the demand for secure, open, and high-performance home and enterprise gateways grows, so does the need for a modern, modular router operating system that meets carrier requirements while remaining open to developers. prpIOS, developed by the prpl Foundation, is one such platform. prpIOS is not. Carrier Routing System (CRS) is a modular and distributed core router developed by Cisco Systems Inc that enables service providers to deliver data, voice, and video services over a scalable IP Next-Generation Network (NGN) infrastructure. If someone promises you a carrier-grade experience, you are getting a tier of product that offers the best experience currently possible. For example, when I raise a Change Request (CR) in ServiceNow to configure a new VLAN ID and VLAN name, the goal is that: ServiceNow sends the CR data to DNAC DNAC applies the configuration using destination address or

```
hostname <cr> gw1#ping ip 192.
```

Learn what carrier-grade means, why network providers care about carrier-grade experiences, and how to create the best experiences.

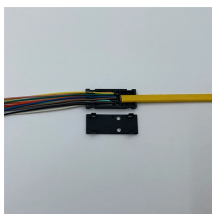

Carrier Routing System (CRS) is a modular and distributed core router developed by Cisco Systems Inc that enables service providers to deliver data, voice, and video services over a scalable IP Next-Generation Network (NGN) infrastructure. In a network topology, these routers are generally positioned in the core or edge of a service provider network. They are also used by Over-the-top content providers and I...

There are a lot of good choices out there if you are looking for a great open source router operating system. Take a look at each of those listed above, and investigate them further if you need more details.

Learn what carrier-grade means, why network providers care about carrier-grade experiences, and how to create the best experiences.

Nokia's IP portfolio, including the 7750 Service Router and 7250 Interconnect Router (IXR-s), provides carrier-grade routing and switching for mobile backhaul, business services, and broadband access.

This document describes the CGOE reference model for open, carrier grade telecommunications solutions using COTS to support NGN. Included in the document are criteria for establishing the model.
