

Core Switch Virtualization

Overview

Cisco ® Catalyst ® 9000 platform StackWise ® Virtual technology allows the clustering of two physical switches together into a single logical entity. The two switches operate as one; they share the same configuration and forwarding state. This technology allows for enhancements in all areas of. Virtualizing made a bigger impact, hands down. 10G core only recently became more affordable for some customers, where Dell sells some models for around \$6500. Other comparable vendors are about \$15k. We are running VLAN SVIs with HSRP for redundancy. This technology simplifies the operational efficiency because we can only control one plane to manage the stacking switches. Note (Check the. A core switch is the backbone of a large-scale network, designed to handle massive volumes of traffic with ultra-low latency and maximum reliability.
