

Disadvantages of Modular Data Centers

Overview

Modular data centers generally have a lower initial Power Usage Effectiveness (PUE) because their compact, self-contained design is highly efficient from the start. When comparing modular over traditional data centers, a number of advantages become apparent, assuming the use case is suitable for modular data center solutions. Sometimes, you need a massive, purpose-built data center facility. In those cases, the modular approach is not optimal. They're made up of prefabricated modules, each with their own cooling, power, and IT equipment. These modules are built in a controlled environment (usually at the manufacturer's facility) and then brought to the deployment. At last week's Data Center World conference, Kevin Brown, VP, Global Data Center Offer, Schneider Electric, presented a session titled, "The Pros and Cons of Modular Systems. Prefabricated modules promise faster deployment and greater certainty, but are they always the right choice for data center builds?"

This whitepaper delivers a balanced evaluation of modular data center strategies, outlining where. This is the next generation of data center, designed specifically to meet the needs of incremental, flexible expandability

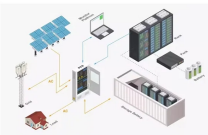

with better time to market and return on investment.

Disadvantages of Modular Data Centers

	<p>The knowledge and expertise factor: One of the drawbacks of using a modular data center is that you may not be leveraging in-house and vendor knowledge about traditional data centers.</p>

Modular data centers are ideal for rapid deployment and situations where space is limited, while traditional builds are suited for large-scale, long-term investments.

In this article, we will explore the advantages and drawbacks of modular data centers, shedding light on the efficiency and complexity of this innovative approach to data center design.

MDCs are economical, fast and energy-efficient ways to deploy a data center wherever it's needed. TDCs are large, immobile buildings that can withstand excessive use and power.

In this brief video, Kevin Brown, VP, Global Data Center Offer, Schneider Electric, offers thoughts on the benefits and drawbacks of pre-fabricated modular data center units.
