

## Do I need to install fiber optic cables on both sides of the switch

### Overview

Consecutive-fiber positioning is implemented by installing the fiber adapters in opposite orientations on each end of the link (i., 1,2,3,4. ) on. My advice is to pick one side (probably the MDF distribution) and install your crossover cables there. Of course in practice I usually just see people flip polarity randomly until it starts working. Or use Bi-Directional optics so you don't have to worry about polarity :) yeah, flipping them is. Fiber optic internet is generally installed in the following 5 steps, which we'll dive deeper into throughout the article: A technician checks your area and prepares the connection from the neighborhood fiber network. A fiber cable (drop) is run from a nearby terminal that could be either a pole or. Also thanks to Init7 (for the great service), r/FiberOptics and FS for providing me with what I needed to get this setup going. The level of the outside grade comes about halfway up the basement wall. Here's what you'll need: Fiber Optic Cables - hese thin strands, as fine as a human hair, are installed either underground or attached to utility poles. Handle with care to prevent any bends or excess tension; splice or terminate with precision; test using OTDR and loss measurements; documenting.
