

## Function of Small Distribution Boxes in Kyrgyzstan

### Overview

Switches / isolator: Controls circuits and provides shut-off for maintenance.  
Residual current protection (RSD/RCCB/RCBO): Detects leakage current and cuts off power to reduce electric shock risk. A distribution box (distribution board / DB box) receives incoming power from the mains supply and safely distributes it to multiple branch circuits. These boxes house various circuit breakers. There are two types of transfer switches: 1) Manual Transfer Switches: Used when one manually operates the switch to generate the electrical load to the backup power.
