

High-voltage busbar section maintenance operation

Overview

Maintain the protection system - Busbar protection systems require regular maintenance to ensure that they continue to function correctly. IV EXECUTIVE. For these applications, the chief concerns for protecting the bus are normally meeting operating requirements and cost of protection. High speed clearing to maintain system stability is not normally necessary. Security is maintained by simple time coordination, or via hardwired communications in. In principle, busbar protection is needed when the system protection does not protect the busbars, or when, in order to keep power system stability, high-speed short circuit current clearance is needed. However, most clients will not see this length due to.
