

# How to connect the 10kV outgoing line cabinet and the busbar

## Overview

Follow these instructions during the installation process: Start the installation by connecting the switchboard. It is mainly used to distribute the electric energy on the 10kV bus to different outgoing circuits and is a key equipment connecting the bus and external power lines (such as. This indicates the extent of the installation, such as the number of busbars and branches, and also their associated apparatus. A pre-construction conference or toolbox talk will take place to brief all operatives on this method statement. It offers a tight and cost-effective joint. Welding techniques, including traditional welding and braze welding.
