

How to press down a network patch panel

Overview

If you want reliable results, the winning recipe is simple: keep pair twists tight right up to the IDC, punch once with the blade oriented correctly, strain-relief the jacket (not the conductors), and dress the rear so nothing is under tension. The complete process for terminating cable runs at a patch panel, from mounting and cable management to punch-down, labeling, and testing every port. Use cabinet screws to fix the network patch panel to the network cabinet. This is essential for streamlining network. If you're still deciding which panel style fits your site (keystone vs punch-down vs pass-through), start with How to choose a patch panel and come back here once the hardware is locked in.
