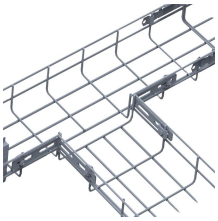
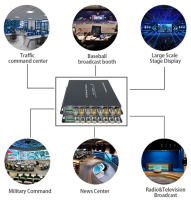
How to solve the mutual interference of beam splitters

How to solve the mutual interference of beam splitters



We aim to find design rules that can be reliably used for on-chip efficient beam splitters without the need for time-consuming and computationally expensive simulations for each individual component.

Classically, a 50/50 beamsplitter splits the intensity of an incoming beam in two. Quantum-mechanically, it will not split each photon in two, but it will transmit or reflect each photon with 50% probability (see ...



eam splitters. In this article, we analyze the most general two-port beam splitter which can be lossy, asymmetric and unbalanced, and find the non-trivial constraints on the m

In this paper, we theoretically propose and demonstrate a non-unitary beam-splitter (BS) by introducing coupling losses at the interface of the plasmonic waveguide and multimode dielectric ...

The presence of quantum Rayleigh scattering, or spontaneous emission, inside a dielectric medium such as a beam splitter or an interferometric filter prevents a single photon from propagating in a ...

We presented results demonstrating fourth-order interference of mutually incoherent classical laser pulses in a multi-port beam splitter device, embedded within a multi-core optical fiber.

We give a classical argument based on a Mach-Zehnder interferometer, shown in the figure below, that there is a 90 phase shift between the reflected and transmitted beams in a lossless, symmetric beam ...

For example, in the classic double-slit experiment, photons that pass through two slits interfere with each other and form an interference pattern on a screen. The interference pattern ...

Abstract: We present experimental evidence for two-photon interference (TPI) in a variation of the Hong-Ou-Mandel experiment in which photons with different polarizations enter only one of the beam ...

In this article, multi-photon interference using the original HOM interferometer setup is analyzed. More specifically, for any photon number state with Gaussian spectral distribution entering ...

In this paper, we demonstrate a single stage optical beam splitter with large number of outputs that avoids multiple insertion loss by using a 1x12 MMI on SOI with a rib waveguide structure.
