

Huijue Core Switch Port Configuration

Overview

To enable a port on a Huawei switch, start by accessing the device's command-line interface (CLI) via a console cable or SSH. Use the system-view command to enter configuration mode, then navigate to the target port using interface GigabitEthernet 0/0/1 (replace with your. In this scenario, IP addresses of the interfaces connecting the core switch to the BRASs and firewalls and OSPF need to be configured on the core switch, so as to implement connectivity between the user network to egress network through the core switch. Whether you're setting up a new network segment or troubleshooting connectivity issues, understanding how to enable ports properly ensures seamless data flow while maintaining security. Use the following AAA commands to create a new user. For example: Replace USERNAME with the new username, set the password, define service-type (telnet, ssh, etc. It can also be used to gather information about the switches, such as their IP addresses, MAC addresses, and firmware versions. Nmap: Nmap is a well-known network scanner that can be used to scan. Understanding the Huawei switch command configuration starts with a firm grasp of the system view command and the role of VLAN configuration. vlan

10 // Create vlan 10 and enter vlan10 configuration view.
