

Insert multimode fiber into a single-mode optical module

Overview

Connecting a multi-mode SFP to single-mode fiber creates a major signal mismatch. A small portion of the transmitted light gets captured. This leads to high attenuation and frequent link drops. I suggest you avoid such setups. It receives the optical signal on one port, converts it into an electrical signal, and then retransmits it as an optical. In general, single-mode fiber and multimode fiber cannot be directly connected.
