Lc-lc interface method

Lc-lc interface method

This two-dimensional LC (LC-LC) system is an innovative, all-in-one system that uses the novel Thermo Scientific Vanquish Dual Split Sampler to enable users to seamlessly switch between both system ...

Various interfaces for LCMS were developed, but issues with sensitivity, stability and user-friendliness were faced. After further improvements and developments, API, a type of soft ionization technique, ...

To achieve effective method optimization, two-dimensional liquid chromatography (2D-LC) instrumentation-related parameters must first be characterized, as they directly influence both ...

In this work, a multicolumn online LC \times LC approach is demonstrated, which simplifies column screening and method development for screening targeted compounds in multicomponent ...

Liquid chromatography-mass spectrometry (LC-MS) is an analytical chemistry technique that combines the physical separation capabilities of liquid chromatography (or HPLC) with the mass analysis ...

The document discusses various liquid chromatography-mass spectrometry (LC-MS) interfaces, highlighting methods of sample introduction and ionization such as electrospray (ES), atmospheric ...

A great way to get help when transferring a method to a column with different dimensions is to use the Agilent Method Translation Software. You can find the method translator by typing "LC ...

Chapter 2 introduces the detailed configuration of the LCMS instrumentation. It generally consists of a LC separating system, a mass analyzer and the LCMS ...

In liquid chromatography (LC), the surfaces encountered during sample aspiration, storage, injection, separation, and detection can determine whether a method produces accurate, ...

In this review, practical principles and guidelines for designing LC × LC methods are given. Selected applications from the food, plant, polymer and bioanalytical sectors from the last five years ...

This tutorial aims to provide detailed information on theoretical and practical aspects of the LC×LC approach with a particular focus on column combination, method optimization and ...
