

Material characteristics of fiber optic pigtails

Overview

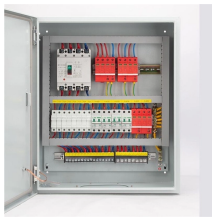

A fiber optic pigtail is a short length of optical fiber —typically 0. 5m to 2m—that has a factory-terminated connector on one end and bare fiber on the other end. This sensitive end is fusion spliced onto another single fiber (or fiber bundle), providing a robust and reliable link. Fiber pigtails are simple in appearance, yet essential in function. They are the bridge between fiber optic cables in the field and the equipment or patch panels that manage them. The most urgent. IDEAL FOR CATV, FTTH/FTTX, TELECOMMUNICATION NETWORKS, DATA PROCESSING NETWORKS, LAN/WAN NETWORKS.

Material characteristics of fiber optic pigtails

A fiber optic pigtail is a short, usually unjacketed, optical fiber cable that has a factory-installed connector on one end and a length of exposed fiber at the other.

Characterized by having an optical fiber connector on one end and a bare fiber end on the other, they are primarily used to connect optical transceivers or other optical devices. This article ...
