

# Module box next to the distribution box

## Overview

Power distribution panel is a central controlling hub for electrical distribution in a building where power is received and distributed to the different power utilization source of equipment. A junction box is a simple protective enclosure for wire connections. A marshalling panel organizes and routes instrumentation signals between field devices and control systems. A system cabinet houses complete control and distribution systems with active components like PLCs, circuit breakers, and. True flush, non-obtrusive design with intuitive door lock. The enclosure material is painted sheet steel thickness of 1. PREMIUM CONSTRUCTION POWER DISTRIBUTION BOX: Crafted by WESTERN, the 6506TLSX Temp power box features a durable blend material for long-lasting performance in demanding environments.
