In digital transmission, the number of bit errors is the number of received bits of a data stream over a communication channel that have been altered due to noise, interference, distortion or bit synchronization errors. The bit. Bit Error Rate (BER) testing is a crucial aspect of evaluating the performance of digital communication systems. The BER measurement helps in assessing the

quality. The probability that a MAC Protocol Data Unit (MPDU), excluding any preamble, transmitted by one MAC entity is not reported correctly at the PHY service interface of a peer MAC entity, due to operation of the conveying Physical Layer entity, and not due to the normal operation of the MAC protocol.
