

## Price list for DML single-fiber bidirectional interconnect for data center interconnects

### Overview

This guide explains how bidirectional SFP technology works and outlines the key specifications to consider when selecting modules for single-fiber links. Data center interconnect refers to the solutions and technologies that link multiple data centers, enabling them to function as a cohesive network. This capability is essential for supporting cloud computing, data redundancy, disaster recovery, and global operations. As businesses increasingly rely on these technologies, they enable high-speed data transmission in fiber-optic communication networks by directly varying the drive current to produce modulated light output. They are widely used in telecommunications, data centers, and broadband access networks due to their compact size, cost-effectiveness, and reliability. A bidirectional SFP (BiDi SFP) provides an efficient solution by enabling data transmission and reception over a single strand of optical fiber. FS offers a comprehensive range of 10G BiDi modules tailored for diverse scenarios. Instead of routing traffic between sites over the public internet, DCI uses dedicated circuits that provide

## Price list for DML single-fiber bidirectional interconnect for data cen

Our solutions support both single-mode and multi-mode fiber for AI and cloud data centers, delivering up to 50% lower power than DSP-based alternatives through advanced analog optical interconnect ...

Learn how to choose the right bidirectional SFP for single-fiber links. Compare wavelengths, distances, and compatibility to optimize your optical network.

This compact module features low insertion loss, high channel isolation, and excellent stability, making it ideal for telecom networks, data center interconnects (DCI), 5G transport networks, and fiber access ...

Optimize your fiber utilization with FS 10G BiDi SFP+ modules. Single-fiber 10G transmission, lower costs, high compatibility—ideal for data centers and telecom networks.

These solutions include high-count ribbon fiber cables, available in configurations ranging from 96 to 6912 fibers, and adhering to international standards such as IEC 60794-5-10, ITU-T, RoHS, and ...
