Using a structured root cause analysis (RCA), we examined two cases of retained pigtail catheter obturators resulting in catheter malfunction and unresolved pneumothorax.

Moreover, malpositioned pigtail catheters are a notable cause of delayed care, increased cost, and frustration for patients and providers. Careful technique and understanding of the nuances ...

We identified multiple contributing factors, including unrecognized and novel radiographic clues (Figure 1), human errors, communication breakdown, device design flaws (Figure 2), and opportunities for ...

When you use the receptacle screws instead of wire nuts, you rely on the brass interconnect tie between the screws to make contact. These interconnect ties are not always reliable ...
