

## Relationship between RJ45 interface and optical module

### Overview

RJ45 SFP modules connect traditional copper Ethernet cables to SFP switch ports initially intended for fiber optic connections. Rather than transporting light signals like fiber modules do, these adapters convert the electrical signal transmission over copper medium. Organizations that need to maintain “backward” RJ45 support can feel overwhelmed by a host of modules and solutions that attempt to balance compatibility, price, and. As organizations upgrade switches and routers with SFP ports while still relying on traditional RJ45 cabling, the SFP to RJ45 module has become an essential bridge between fiber-oriented hardware design and copper Ethernet connectivity. This article provides a comprehensive guide to SFP to RJ45. RJ45 and SFP optical transceiver are two common ways to connect network devices. Each has advantages in speed, reach, cost, flexibility, and usage scenarios.
