

Secondary wiring of power cabinet

Overview

Secondary wiring: used to control, measure, protect, and indicate signals for the primary wiring. Primary distribution systems consist of feeders that deliver power from distribution substations to distribution transformers. Our product experts are here to assist you. Primary switches are usually selector or duplex type so that transformers may be transferred to alternate. This document represents the minimum requirements and specifications for the installation of the electrical underground distribution systems fed from padmounted transformation, serving Secondary Service Accounts, to be transferred to Oncor Electric Delivery Company ownership. The following is a detailed introduction to it: - ****Familiarize with Drawings****: Carefully study relevant drawing materials such as electrical schematic. Mimic bus symbols accurately reflect the distribution system arrangement that they are producing.
