Overview

Start with this definitive resource of key specifications and things to consider when choosing Optical Time Domain Reflectometers (OTDR). Start with this definitive resource of key specifications and things to consider when choosing Optical Time Domain Reflectometers (OTDR). RP Photonics offers a lot of help: Get sufficiently informed about the technical background. RP Photonics supports you with unique content. Clearly define your selection criteria. An AI-based. Optical time domain reflectometers (OTDR) measure the elapsed time and intensity of light reflected along an optical fiber. They are useful tools for locating problems in an optical network as they can compute the distance to breaks or attenuation. They characterise the length, attenuation and return loss (over individual events along link: connection points (splices, connectors), etc.).
