

Should DP to fiber optic conversion use multimode or single-mode

Overview

Choosing between single-mode (SMF/OS2) and multimode (MMF/OM3-OM5) fiber is more than a cabling preference, it determines your reachable distance, optics cost, upgrade path, and even day-to-day operability (polarity, cleaning, testing). Fiber media converters are mainly divided into two types: single-mode and multimode, based on the type of optical fiber they work with. This is the most ideal and simple application scenario. What if end B is located in another building, dozens of kilometers far away from end A?

Or end B equipment is single-mode or must use a single-mode fiber connection?

In the former case, you. There are two main types of fiber optic cables: single mode and multimode. Although they can do the same job in some instances, the different construction methods make each of them better suited to certain tasks and budgets.
