

Should the relay protection tester be powered by AC or DC

Overview

The main body of the test instrument is prohibited from being connected to a 380V three-phase AC power supply or a DC power supply. Before the test, the grounding wire jack must be. The RELAYSTAR-702 Protective Relay Test System by Haomai Electric combines industrial-grade power (40A per phase, 120V AC/DC) with cutting-edge DSP technology for precision validation of relays in transmission lines, substations, and industrial grids. Designed for engineers demanding reliability. Our relay protection tester offers comprehensive testing for both optical digital and traditional protective devices. With up to 4 voltage channels. Therefore, protective relays as well as recloser controls must be tested throughout their life cycle, from their initial development through production and commissioning to periodical maintenance during operation. Relay test equipment are devices and testers to ensure that relays are operating correctly.
