

The distribution box may contain both dry and wet components

Overview

One of the key components in many septic systems is the distribution box (D-box). This box plays a vital role in the proper functioning of the system by evenly distributing effluent from the septic tank to the drain field. The conductors shall be run as multiconductor cord or cable assemblies or within raceways; or, where not subject to physical damage, they may be run as open conductors on insulators not more than 10 feet (3. Conductors. Let's dive in and explore.
