

Total length of telecommunications optical cable

Overview

Generally, the maximum length of a single-mode fiber optic cable is around 100 kilometers (62 miles) for data transmission, while the maximum length of a multi-mode fiber optic cable is around 2 kilometers (1.2 miles). By the end, you'll have the knowledge to choose the right cable. In general, the maximum cable length also depends strongly on the quality of the cable, the strength of electrical environmental noise, and the maximum baud rate / pulse rate to be transmitted. So the really useable maximum length can be less than the respective value given below, if used in. Fiber optic cable transmission distance is determined by two primary physical factors that affect signal quality as light travels through the fiber medium. Attenuation First is the attenuation of the optical fiber.
