

Types of Network Core Layer Switches

Overview

Different types of Ethernet switches perform different roles in the layers of high-capacity networks. The hierarchy Ethernet network. The term campus LAN refers to a LAN network that spans a single geographic location, such as a building or university campus. A campus LAN can be an entire network or part of an enterprise network. Each layer is served by specialized switches, with the access switch connecting end-user devices, the distribution switch aggregating traffic and enforcing policies, and the core switch acting as. Its primary function is to rapidly forward data packets between different aggregation switches and, ultimately, to the internet. This post mainly explores the confusing problem: core.
