

What is a pigtail A pigtail with a chip

Overview

In telecommunications, a pigtail is a single, short, usually tight-buffered, optical fiber that has an optical connector pre-installed on one end and a length of exposed fiber at the other end. It acts as a jumper between the device terminal and the spliced bundle of circuit wires. It serves as a bridge, allowing technicians to repair specific connection points without disturbing the rest of the system. Let's break down their structure and role in modern setups.
