

What is a power distribution box system

Overview

A power distribution box (also called PDU or distro) directs electricity from a main source to multiple circuits. It acts like a hub or traffic controller, managing power flow to different areas or devices. Whether you are a professional electrician, a facility manager, or even a homeowner trying to better understand the electrical system of your home. It organizes and controls power flow, ensuring safety and efficiency. By managing circuits individually, it prevents overloads and keeps your electrical setup running smoothly.
