

What is the high speed of fiber optic patch cords

Overview

Singlemode fiber optic patch cables support high-speed networks up to 50 times farther than multimode fiber optic cables. In addition, the narrower 9-micron core provides faster transmission speeds and long-distance communication ranges. The wrong choice — whether it's an underperforming multimode grade or an unnecessarily expensive singlemode run — can either cripple your network's reliability or. Fiber optic patch cords, also known as fiber optic patch cables or fiber jumpers, are indispensable components in modern optical networks.
