

## What to do if your router is restricted by fiber optic cable

### Overview

When switching to fiber internet, many users wonder if they're able to use their own router instead of the one provided by their internet service provider (ISP). In this guide, we'll explain router compatibility, setup steps and whether upgrading your router is necessary to maximize fiber speeds. Compatible router: Verify that your router supports fiber optic input (look for an SFP or WAN port labeled). Most ISP with ONTs can support a external wifi router connected to the ONT. Some may have special configurations to enable that. Being NEW to. Is your Brightspeed fiber internet not working?

These steps can help resolve common fiber internet problems. 1) and configure these essential settings: For optimal performance, enable Quality of Service (QoS) settings if you use VoIP or video conferencing services regularly. This ensures critical traffic.

## What to do if your router is restricted by fiber optic cable

Run a speed test: Use tools like Speedtest to verify your fiber optic speeds. Troubleshoot if needed: If there's no connection, reboot the OLT and router, or contact your ISP.

In your case, the idea that you need to use its router between a modem and your RAX200 is nuts. If you have Internet that fast, there is a good chance that it is an optical fibre ...
